Insights & Recommendations

Key Findings

- **Funding Inefficiency:** Our costs are rising faster than our volume. We are paying a premium for the same goods due to weak commercial enforcement.
- **Operational Gridlock:** The 8-month PO cycle time is the root cause of **Maverick Spend**. Departments are bypassing the system simply to survive.
- **The "Unreliability" Tax:** We are hoarding expensive "Safety Stock" (62% Inventory spend) solely to buffer against our vendors' poor delivery performance.
- **The Payment Paradox:** We pay invoices in **~3 days** (financing the vendor) while accepting **57% OTIF** (sub-standard service). We have surrendered our leverage.
- **Capex Cliff:** Buying IT assets instead of leasing them is building a massive, future depreciation shock for the P&L.

Strategic Recommendations

- **Slash the "Red Tape":** We cannot police Maverick Spend until we fix the **246-day delay**. Speed is the only cure for non-compliance.
- **Reset Working Capital:** Stop paying immediately. Move to **Net-30/45** terms. Use "Fast Payment" only as a strategic reward for >95% reliability.
- **Consolidate for Reliability:** Stop funding vendors who fail us. Shift volume to the few partners who deliver **On-Time-In-Full** and delist the rest.
- **Automate the Tail:** Move low-value transactions to P-Cards/Catalogs. Free up our buyers to solve the high-value supply chain risks.
